

# Hello Truckers....

When it's  
-HOT-  
\*FROSTY\*  
is your  
best  
friend.

## FROSTY

offers an affordable cutting edge cooling solution for your sleeper cab comfort with 43 years of experience built in.

A reliable **American quality** air conditioning system with high performance features and virtually no maintenance.

### Our difference is modular automotive components.

The **noise** and **heat** generating parts are mounted outside. The 115 volt compressor is frame mounted. The condenser is mounted under the cab. The evaporator mounts inside in a cabinet. Dual blowers provide up to **525 CFM** of airflow exchanging the air in an average sleeper **2.5 times a minute**.

The **12 volt** evaporator and condenser connect to your battery. The **115 volt** compressor only requires **8 amps** of power from a 3-4kw generator or standard 15 amp wall outlet.

### R-134a refrigerant and standard automotive parts makes the system easily serviceable at any truck stop.

It's not a new idea. Danhard perfected this technology in 1995 for Ambulance and Fire trucks with hundreds of systems on the road, mandatory in many states.

## 70-3000 System

Hose kit

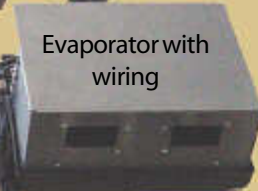

Compressor frame bracket

Compressor

Evaporator with wiring

Stainless steel bezel

Condenser

Return air grille

Digital thermostat
