

## 125 Volt and 230 Volt Systems

Since 1995, Danhard Inc. has designed a wide array of shoreline and generator powered systems for multiple applications. While these systems have been successfully used in different industries, it should be noted that we provide assistance in determining the correct system to fit your needs.

Our 125 volt and 230 volt systems offer many advantages, such as:

- No roof installation to increase the vehicle's height
- Modular design to allow flexibility in the placement of components
- Power source can be from generator or a standard shoreline outlet
- Use of standard R134a refrigerant
- Solid history of reliability and performance

To learn more about these systems and their fit to your application you may contact us by e-mail ([sales@danhard.com](mailto:sales@danhard.com)) or at the above numbers.
